AUDIO SYSTEMS

E **S** DS RS

Why quality cables are important?

Cables are not able to make your sound system sound better, but they ensure that **every detail** and information **of the signal** is transmitted to the dedicated receiving device. Using a poor cable can limit your whole HiFi setup and definitely can be the bottleneck of your sound experience.

Our new Connect it cable lineup **covers all your needs** and not only offers different connection types & technologies, but also various conductor & plug materials. It perfectly matches each quality level of our products.

With our **30 year experience** in HiFi we developed four cable lines which cover all your needs for analogue audio system connections.

High quality materials

Metal plugs & highest purity conductors

Connector diversity

XLR, mini XLR, 5P DIN and more

Made with care

Technically correct & beautiful looks

Physics doesn't lie

**- "A cable must be invisible to your ears!" -**

Good tires don't automatically make a car a sports car, but a sports car needs good tires to deliver its full performance on the road. The same applies to sound systems.
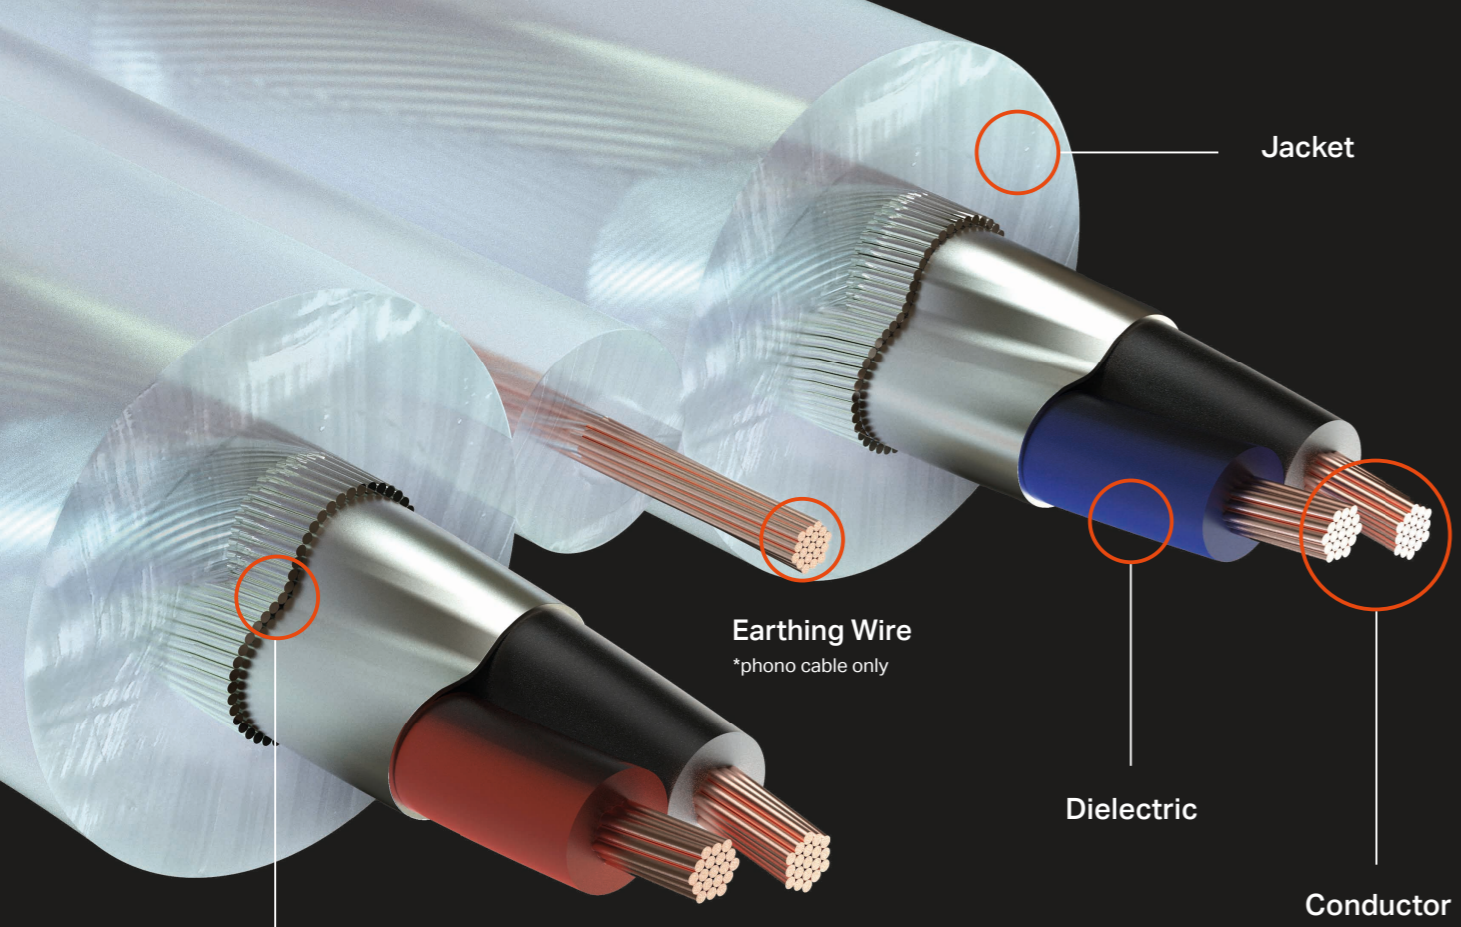

- "Use the correct cable for your application!" -

Every signal transmission type demands specific requirements for the cable. From the outside, you can not judge the cable at all. A standard line cable might look the same as a phono cable, but both will not work for each others application.

- "High quality materials & build quality will make the difference" -

We only use high purity copper and pure silver conductors, as these materials offer a premium signal transmission. Not only the conductor is important, also the dielectric, shielding and build quality itself. The same applies to the connectors. Additionally, the connectors always provide a tight fit to keep the contact resistance as low as possible.

Comparison Chart - Phono & Line Cables

	E - LINE	S - LINE	DS - LINE	RS - LINE
Geometry	Symmetrical - separate shielding, + and - signal use same quality conductors (no coaxial cable)			
Conductor	99,9% OFC oxygen free copper	99,9% OFC oxygen free copper	99,9% OFC oxygen free copper	Matched crystal silver
Construction	2x 0,2 mm² (19 x 0,1mm)	2x 0,2 mm² (19 x 0,1mm)	2x 0,2 mm² (19 x 0,1mm)	2x 0,2 mm² (15x 0,10/0,12mm)
Dielectric	High density Polyethylene		High flexible cell polyethylene	
Shielding	Tin plated copper	OFC copper	Helical OFC copper with carbon sub jacket	Helical silver plated OFC copper with conductive TPE sub jacket
Jacket	Transparent PVC	TPE covered with black mesh	Special halogen-free TPE covered with black/white mesh	Special halogen-free TPE covered with metallic grey mesh
Capacity (per m)	100 pF	81 pF	75 pF	58 pF
Connector	Gold plated brass	Gold plated phosphor-bronze	Silver plated copper	Rhodium plated copper

E-LINE

Line & Phono Cables

High Performance signal cables, optimized for use with turntables and other audio components. These highly flexible and perfectly shielded cables offer low capacitance without any coloration in sound. **„State-of-the-Art"** components for leads, dielectrics and plugs were chosen after intense listening tests.

S-LINE

Line & Phono Cables

The Connect it **S** cables feature a shielded flexible OFC copper conductor for an interference free signal transmission. The gold plated connectors ensure a low contact resistance for a lifetime. Connect it S cables are handmade with care in Europe.

DS-LINE

Line & Phono Cables

The Connect it **DS** cables feature OFC copper signal lines combined with silver plated full metal connectors. This combination results in a neutral, high quality signal transmission. The different connector types offer a broad compatibility with many products and transmission types.

RS-LINE

Line & Phono Cables

The Connect it **RS** line represents our top-notch cables. The signal lines are made out of highest-grade silver strands which results in a lower resistivity and better conductivity compared to copper. The low capacitance reduces high-frequency attenuation and ensures perfect transmission over the entire frequency range.
